

AKT Institute

Business Design Specification

AKT Institute CRM

Phase 1 — Business Workflow Specification

A plain-language design of how leads are captured, called, followed up, visited, counselled and converted — written for management, callers, counsellors, developers and QA.

Version 1.0 · Business-approved baseline

Audience: Management · Callers · Counsellors · Development · QA

Scope: Lead intake → Admission · Business workflow only (no technical detail)

1. Objective

What this CRM is for. AKT Institute receives student enquiries from many sources (ads, website, referrals, walk-ins, imported lists). The CRM helps the team **respond fast, follow up with discipline, and convert more enquiries into admissions** — while giving management clear visibility.

The core idea — Action-Driven. Instead of staff guessing what to do, the system always tells each person **the next thing to do and when**. Everyone works from a simple prioritized to-do list, not a confusing status board.

Goals of Phase 1 — keep it simple and prove the core workflow works in real life:

- Make it effortless for **callers** to log what happened on a call and what's next.
- Make sure **no lead is forgotten** — every active lead always has a next action.
- Collect student information **gradually**, never with big forms.
- Hand a lead to a **counsellor only after a verified visit** (or online booking).
- Give every role a clean **dashboard** showing what to do and how they're performing.

Phase 1 is about adoption and validation — getting the team to use the system happily — not advanced automation. We observe real usage first, then decide what to automate later.

2. User Roles

Role	What they do
Admin / Lead Team	Create or import leads. Assign leads to callers. Reassign when needed. Oversee the whole pipeline.
Caller	Call assigned leads, log the outcome (4 buttons), set the next action, and follow up until the student visits or books. Cannot self-assign or import leads.
Reception	Marks a student as arrived when they physically visit (check-in). This is how a visit becomes "completed."
Counsellor	Takes over after a verified visit (or online booking). Handles course, fee, scholarship, documents, and closes the admission.
Accountant	Verifies that payment has actually been received. Does not own the lead — only confirms payment.
Management	Views dashboards: funnel, conversions, team performance, and where leads are stuck.

3. End-to-End Lead Lifecycle

In one line: a lead is created → assigned to a caller → worked through call outcomes → if interested, nurtured to a visit or booking → a verified visit hands it to a counsellor → counselling → payment → admission.

4. Lead Assignment Workflow

- **Who can assign:** Admin / Lead Team only. Callers **cannot** self-assign or import leads.
- **Who owns the lead:** the assigned **Caller**, until the student visits (or books online).
- **Caller responsibilities:** call the lead, log the outcome, set the next action, keep following up. A newly assigned lead appears **at the top of My Day** so it gets called quickly.

Example: Admin imports 50 ad enquiries and assigns 25 to Rahul and 25 to Sneha. Each caller opens "My Day" and sees their new leads waiting at the top.

5. Caller Workflow

1. Open **My Day** and pick the top lead.
2. Call the student.
3. Tap **one of four buttons** to record what happened.
4. The system saves it and (where needed) asks "what's next?" — then schedules the lead's next step.

The caller never types a "status." They just answer "**what happened?**" and "**what's next?**"

6. Call Outcome Workflow

📞 Couldn't Connect

🔥 Interested

🚫 Not Interested

⚠️ Invalid

6.1 📞 Couldn't Connect

Couldn't Connect

reason (optional)

Returns to pool to retry later

- **Meaning:** caller tried but couldn't reach the student (no answer, busy, switched off).
- **Caller action:** tap the button; optionally note a reason.
- **Result:** the lead goes back into the shared pool after a short wait, to be tried again. (Already exists today.)

6.2 🔥 Interested

Interested

choose next: Follow-up / Visit / Booking

- **Meaning:** the student is genuinely interested.
- **Caller action:** capture Name + Remarks (Course if known), then choose what's next.
- **Result:** lead stays active with a clear next step (Section 7).

6.3 🚫 Not Interested

Not Interested

pick reason

Lead closed (Dead)

- **Meaning:** student won't proceed (joined elsewhere, fee too high, not eligible...).
- **Result:** exits the workflow; the **reason is saved** for reporting.

6.4 ⚠️ Invalid Lead

Invalid

pick reason

Lead closed (Dead)

- **Meaning:** contact is unusable (wrong number, fake, no valid contact).
- **Result:** exits the workflow; reason saved for **data-quality & source reporting**.

7. Interested Workflow

- **Follow-up Later:** interested but not ready (wants info, parent/fee discussion). Caller sets a date; lead stays with caller and returns on that date.
- **Plan Visit:** student will come to the institute. Caller schedules date + branch.
- **Proceed to Booking:** for **online** students who won't visit — caller moves them toward booking/admission.

Example: Aman is interested but "let me discuss fees with my father" → **Follow-up Later**, 2 days. Priya is keen and local → **Plan Visit** for Saturday.

8. Follow-up Workflow

- **When used:** student is interested but needs more time or information.
- **Information required:** follow-up reason, next follow-up date, remarks.
- **How it returns:** the lead **automatically reappears in the same caller's My Day** on the chosen date. Ownership stays with the caller.

Example: "Send brochure, call back Wednesday." → on Wednesday the lead is back at the top of Rahul's list with the note already there.

9. Visit Workflow

If the student does **not** come:

Visit Missed

date passed

Caller: Reschedule / Continue Follow-up / Mark Not Interested

- **Caller:** schedules the visit and keeps following up until the student actually comes; can reschedule if missed.
- **System:** sends automatic reminders, and flips the visit to **Missed** if the date passes with no arrival.
- **Reception / Counsellor:** mark the student **arrived** (check-in) → completes the visit and hands the lead to the counsellor.

Important: "Visit Scheduled" is **not** the finish line. The caller keeps working the lead until the student physically arrives.

10. Visit Verification Workflow

❌ Caller CANNOT mark "Visit Completed"

Student physically arrives at the institute

✅ Reception or Counsellor checks them in → Visit marked Completed (verified)

Ownership transfers from Caller → Counsellor

Why this matters: the caller is on the phone, not at the building — they can't truly know if a student showed up. So a visit is verified **only by the people who actually see the student** (Reception or Counsellor). This keeps the most important conversion number honest. The same check-in also captures **walk-ins** who arrive without an appointment.

11. Ownership Lifecycle

- **Admin/Lead Team:** owns at creation; assigns to a caller.
- **Caller:** owns until the student **physically visits** (offline) or **books** (online).
- **Counsellor:** owns from visit/booking through counselling and **payment-pending** (chases payment).
- **Accountant:** never "owns" — only **verifies** payment.
- **Admin:** lead closed as **Admission Done**.

The original caller always keeps credit for the lead, even after handoff.

12. Progressive Data Collection

Stage	Required Information	Purpose
Lead created / imported	Mobile number only	Get the lead in fast; don't block intake
Interested	Name, Remarks (Course if known)	Confirm a real person and capture interest
Follow-up Later	Reason, Next date, Remarks	Schedule the next touch with context
Plan Visit	Name, Course, City, Visit date, Branch	Prepare for the visit
Before Counsellor handoff	+ Qualification	Give the counsellor enough to advise
Booking / Admission	Delivery mode (Online/Offline)	Drive the correct admission path

Why gradual? A long form on the first call slows the caller, annoys the student, and produces guessed or blank data. Collecting **a little at each step** keeps callers fast, keeps data accurate, and means every field is captured at the moment it's actually known.

13. My Day Queue (Caller Dashboard)

The caller works from **one prioritized to-do list** — not status tabs. The system decides the order so the caller always knows who to call next.

#	Queue Group	Meaning
1	 New Leads	Freshly assigned — call quickly
2	 Overdue Follow-ups	Promised, now late — Hot first
3	 Visit Confirmations	Visits due today / tomorrow — protect show-rate
4	 Due-Today Follow-ups	Today's committed work
5	 Missed Visits	Didn't show — re-engage while warm
6	 Retry Pool	Couldn't connect — ready to try again

Within each group: **Hot** → **Warm** → **Cold**, then by due time. New leads jump to the top the moment they're assigned. The header shows a single number — "**X due now**" — and the caller just works top to bottom.

14. Counsellor Workflow

- **Visit Completed:** lead arrives in the counsellor's queue right after check-in.
- **Counselling:** counsellor discusses course, fees, scholarship, documents.
- **Payment Pending:** student wants to join but hasn't paid; the **counsellor follows up** and the **accountant verifies** payment.
- **Admission Done:** payment verified and student enrolled — lead is converted.

15. Dashboard Requirements

Caller Dashboard ("My Day")

A single ranked list of who to call next (Section 13), plus simple personal numbers: calls made, connected, follow-ups done on time, visits booked, conversions.

Counsellor Dashboard

A ranked list: students awaiting first counselling, today's visits/walk-ins, payment-pending to chase, and documents pending — plus personal numbers: visits turned into admissions and conversions.

Management Dashboard

- **Funnel:** how many leads at each stage (New → Interested → Visit → Counselling → Admission) and where they drop off.
- **Source view:** which sources (walk-in, imported, website, ads, referral...) bring leads and admissions — now accurate.
- **Team view:** caller and counsellor performance.

- **Stuck / uncalled leads:** leads assigned but not yet called, or sitting too long, so a manager can step in and reassign.

All dashboards are built to load **fast**, even as data grows.

16. Phase 1 Scope

✓ Included in Phase 1

- Lead creation, import, and **assignment** (admin-driven)
- **My Day** prioritized caller queue
- **4-button disposition**
- **Interested** → **Follow-up / Visit / Booking**
- **Action-driven** next-action management
- **Progressive data collection**
- Visit scheduling, reminders & **verification** by Reception/Counsellor
- **Couldn't-Connect retry pool** (already exists)
- **Ownership transfer** (Caller → Counsellor; Accountant verifies)
- **Counsellor workflow** through to Admission Done
- **Caller, Counsellor & Management dashboards** (incl. uncalled/stuck leads)

✗ Not Included in Phase 1

Revisit after real usage.

- Configurable SLA values & timing settings
- Retry limits / retry cadence tuning
- Nurture tracks & 30/60/90-day automation
- Automatic escalation rules
- Automatic recycling of uncalled leads (handled manually via dashboard visibility for now)
- A settings-management screen
- Any other advanced automation

Phase 1 philosophy: prove the core workflow, drive adoption, keep it simple. Automation comes later — only if real usage shows we need it.
